

# DRIFTPROOF® SPRAYER

## The DriftProof® solution

Wind is a major problem for spray operators. Even a light breeze can result in potentially harmful spray drift. With Technigro's range of award winning DriftProof® sprayers, problem spray drift is now a thing of the past. The patented shield keeps spray droplets in, ensuring the product goes on the ground and not up in the air. This equates to a much safer treatment for operators and the public, with better results. In many cases it even means less product is required, which is also good news for the environment.

## Key features

- > Extremely lightweight and suitable to go on any class of turf
- > Patented, full shielded DriftProof® housing
- > Extremely manoeuvrable with safe 360 degree vision
- > Significantly reduced water consumption
- > Highly visible safety lighting and signage
- > Quickly adapts to 2m or 4m width spray band
- > Blocked nozzle indicator
- > Fitout and spray equipment purpose designed and built for sportsfields and parks

## The ultimate lightweight sprayer

The DriftProof® Quad has been designed and developed by Technigro for amenity turf areas such as parks and sportsfields. Its unique range of features makes the DriftProof® Quad the perfect spray solution for the best practice turf manager:

- > The ability to spray in a range of wind conditions means programs can be adhered to without the usual frustrating delays
- > No spray drift requires less water for even coverage, meaning the turf is dry sooner, allowing for shorter re-entry periods
- > Low pressure nozzles and droplet containment means less unpleasant chemical odours, a feature much appreciated by members of the public
- > Its unique "no tools" folding system means the sprayer converts from large area mode to limited access mode, quickly and simply
- > A total gross weight of just 720kg means less compaction and surface disruption, making the DriftProof® Quad the ultimate light weight sprayer
